

Cunico Corp

INDUSTRY

Precision manufacturing — mission-critical valves, manifolds, and fittings for naval nuclear, diesel-electric, LNG marine, and shipbuilding applications; part of BWX Technologies, Inc. (BWXT) Government Operations following its April 2022 acquisition

LOCATION

Long Beach, California

COMPANY SIZE

35

RELATIONSHIP

Pro Link Systems client since May 2012 — a 13+ year partnership

THE CHALLENGE

When Cunico came under Pro Link Systems' management more than 13 years ago, it was a growing manufacturer of mission-critical components with a 70+ year legacy — a company that needed rock-solid technology governance and robust infrastructure to match the standards of the naval and defense platforms it supplies. As Cunico scaled and later moved through acquisition into BWXT's Government Operations segment, it needed its systems to align with enterprise-grade and defense-supply-chain practices while remaining reliable day to day.

THE SOLUTION

Pro Link Systems serves as Cunico's outsourced IT and technology-governance partner. Over the course of the engagement, Pro Link has:

- Architected, implemented, and maintained both local and cloud-native environments across Cunico's multiple sites
- Hardened Cunico's cybersecurity posture against evolving threats, with continuous monitoring and defense of critical systems
- Designed and enforced workflows, backup and disaster-recovery strategies, and access controls to keep operations reliable as the company scaled
- Supported Cunico through its integration into BWXT, aligning its systems with enterprise-grade practices

THE RESULTS

- A 13+ year, continuously renewed technology partnership — now positioning Cunico as a well-governed supplier embedded within BWXT, a Fortune 1000 nuclear engineering and defense company
