WINBASIC®
Technology Solutions
– EST 1996 –

Winbasic's customised software reduces manual process from 3 days to matter of minutes.

ASIA PACIFIC AEROSPACE

Client since 2007

Asia Pacific Aerospace (APA) specialises in the maintenance repair and overhaul of small to medium gas turbine engines. APA is an Authorised Maintenance Organisation (AMO) to the Australian Defence Force and is a Rolls-Royce Authorized Maintenance Repair and Overhaul Centre.

CHALLENGE:

Asia Pacific Aerospace had an outdated Network with limited remote access and security. Software was outdated, and many internal processes were done manually, which was extremely time consuming.

SOLUTION:

Secure virtualised server implemented with onsite and offsite disaster recovery capabilities.

Winbasic also implemented a virtual private network and secure mobile communications utilising Blackberry handsets and enterprise software. Business needs were analysed, then a customised software system was designed and implemented.

RESULT:

Customised software implemented reduces certain processes from 3 days to minutes.

The customised software designed and developed inhouse by Winbasic was implemented over a 6 week period. The new software was able to reduce a previously manual process of processing spreadsheets into a consolidated report from 3 days to a matter of minutes.

The secure virtual server environment allows secure and efficient external access for remote staff as well as links to international offices.

Outdated, inefficient and costly software was replaced by up to date software, implemented with no downtime to the business.

"David is totally reliable, with a focus on delivering solutions while being practical. He truly is an all rounder who provides exceptional IT support."

Mr Steve Mason
Chief Executive Officer, Asia Pacific Aerospace
