Supercharging a theme park ticketing system

Boost IT faced a fun challenge: Construction of a dynamic virtual environment within Azure capable of hosting a state-of-the-art theme park ticketing system, a seamless Point of Sale (POS) solution, and an engaging Game Kiosk server.

CHALLENGES

- ### Reduce upfront costs

This ambitious undertaking required a low upfront cost along with unparalleled availability and uptime.

- ### Scalable infrastructure

Scalable infrastructure that could handle the exhilarating demands of the theme park experience.

- ### Seamless integration

A challenge was developing a secure and efficient solution that seamlessly integrated with onsite hardware.

Boost IT worked on planning, developing and implementing a viable end solution using Azure AD. Boost IT successfully built a secure virtual environment to host both Windows and Linux servers, protected by a robust web application firewall. The high work-load challenges involved meant Boost IT's support was mission critical.

RESULT

Speedy low cost solution

The solution was priced within the customer's budget constraints and rolled out within the required time frame. The customer was extremely appreciative of the quick turnaround.

Scalable for success

The solution was designed with scalability at its core. The virtual environment offered the flexibility to accommodate future growth, enabling Boost IT's clients to scale their operations effortlessly.

Robust security and connectivity

The virtual environment was fortified with robust security measures, ensuring the protection of sensitive data. Uninterrupted connectivity was guaranteed, allowing visitors to enjoy a seamless and uninterrupted experience throughout their theme park journey.

CONCLUSION

The virtual environment exceeded expectations. Unleashing the full potential of the theme park experience, it gave visitors a seamless ticketing process, smooth POS operations, and an interactive Game Kiosk server.
