BREWDOG AGM

Back after two years away, BrewDog's legendary Annual General Mayhem for its members was back. Held in Hazelhead Park, Aberdeen, BrewDog invited some of the world's best breweries to pour at the event. The event was a must attend for the BrewDog community with tastings hosted by their beer experts, a line-up of music, BrewDog Distilling tent, swathes of street food and much more.

Objectives

BrewDog needed a solid, uninterrupted Wi-Fi solution to ensure ticket validation on entry, cashless payments could be taken by bars and vendors and that social media could be regularity updated.

The project

Corona IT Solutions went with a bonded solution for this event, bonding mobile data and low and high orbit satellites to provide a high speed, low latency connection with multiple forms of redundancy.

Internet was distributed around the site using a point to multi-point wireless system. Additional redundancy was provided in all areas of high importance where connectivity could not afford to be lost.

Corona IT Solutions also provided additional connectivity during the build and dismantling of the event.
