

# How we helped the City of Parramatta migrate to Azure

## The Challenge

City of Parramatta was undertaking a major **digital transformation** and needed to **improve scalability, flexibility, and overall IT performance.**

This required the **migration of 350 servers** from on-premises infrastructure to **Microsoft Azure**, while ensuring **minimal disruption** to operations and **careful optimisation** of their cloud footprint.

**CITY OF  
PARRAMATTA**

## Our Approach

We began with a **comprehensive assessment** of the **existing on-premises environment**, analysing **workloads, dependencies, and performance requirements.**

We designed a **phased migration roadmap** and executed the move using industry best practices to ensure **data integrity and system availability.**

Post-migration, we **optimised the Azure environment for performance and cost efficiency**, supported **testing**, and provided **documentation, training, and ongoing support** to the internal IT team.

## The Result

The successful migration enabled the City of Parramatta to leverage Azure's advanced capabilities, **delivering a robust, scalable, and future-ready IT environment.**

The project marked a key milestone in the City's digital transformation, **improving performance, resource management, and the ability to deliver services efficiently and reliably.**

*Considering an Azure migration? We help councils modernise infrastructure, optimise performance, and transition with minimal disruption. Get in touch to learn how we can support your Azure journey.*
