Tata Chemicals Europe (TCE) is a UK-based chemicals company and a wholly-owned subsidiary of Tata Chemicals Limited. TCE is the UK's only manufacturer of soda ash and sodium bicarbonate and one of the leading salt producers. Their high-quality products are critical raw materials for the food manufacturing supply chain and pharmaceutical product manufacturing.

Business challenges

Infrastructure Needs

TCE required IT infrastructure that aligned with their scale and standards, ensuring security and capability for clients and staff.

Resource Management

The team needed to manage their IT estate without additional resources, focusing on user experience and business growth.

Security & Maintenance

Ensuring secure, well-maintained infrastructure through planned security patches and firmware updates.

Business outcomes

Fully Managed IT Infrastructure

Providing a fully managed 'Infrastructure as a Service' (IaaS) solution, relieving TCE's in-house IT team of time-consuming support tasks.

Improved Performance & Security

The resilient and secure infrastructure led to minimal issues and improved performance.

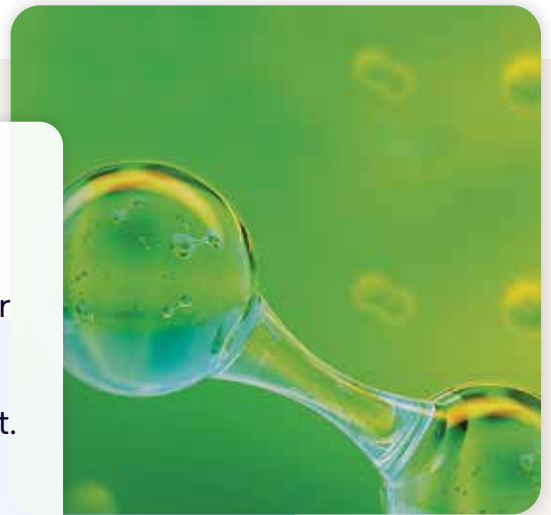

Enhanced Business Continuity

The move to IaaS improved business continuity, optimised performance, and allowed for better management time prioritisation.

A trusted partnership with Nvion enabled a secure Virtual Desktop Infrastructure, supporting TCE's hybrid working model with high user satisfaction.

Nvion has been our trusted technology partner for several years. I can discuss our challenges with them, knowing that Nvion will always put our needs first and not try to sell us anything for their benefit. They truly have our best interests at heart. They work with our limitations and go the extra mile to support our needs.

Martin Murgatroyd, Head of IT
