INFINICLOUD
THE ALL-INCLUSIVE CLOUD

CASE STUDY

Basin Recreation
strives to be
the leader in
providing
outstanding
experiences
to the people of
Park City, Utah

The Problem

Basin Recreation strives every day to be the leader in providing outstanding and diverse parks, trails and recreational experiences to the people of Park City, Utah. However, they housed an obsolete network that caused frequent server crashes, they lacked system uptime, and their data security strategy needed to be revamped. Basin was quoted in the \$50,000 range for new hardware, software and the upgrade, but that was not in the budget for them.

The Solution

Infinicloud provided an efficient solution that met Basin Recreation's price and technology needs. Some of the major improvements Basin Recreation experienced through this partnership include:

- **Upgraded** them to an entirely NEW infrastructure in the Cloud with 99.9% uptime without requiring a single purchase of new hardware (servers, workstations, routers, switches, Internet connection, Microsoft software, AV, etc.)
- **Converted** their usual capital investment into IT infrastructure into a fixed monthly operating expense.

"When it was time to make the decision to replace our old infrastructure or look toward a new cloud-based solution, the decision was clear. We were excited to move into a more progressive and forward thinking solution where the team could be as effective and efficient as possible. The flexibility of staff being able to work from anywhere with dependability was a big motivator. No longer needing complex disaster recovery plans, having automatic software updates, and feeling confident about security were other driving reasons to move to the cloud. We have worked with Infinicloud for all of our IT support needs and going through this transition with their help was the right choice that we are pleased we made."
– Rena Jordan, Executive Director, Basin Recreation

The Results

With the help of Infinicloud, Basin Recreation went from having a low-level IT environment to having access to the unmatched level of expertise that only our team of IT engineers can provide.

- The organization was given the ability to add and remove users quickly without having to purchase full-blown software licenses and workstations.
- Employees were given access to their data and applications from any mobile device, allowing them to work from their multiple locations.
- The company was converted to a pay-as-you-go utility IT model which saves on their total yearly cost of IT ownership.
- The organization achieved peace of mind knowing that their data is protected by military grade security.
