Personalization, proximity and professionalism, the secret that certifies trust for more than 15 years.

More than 15 years ago, Quinielista, a website dedicated to offer quinielistic information services, betting validation and forecasters contest, needed us to help them solve a series of IT challenges that did not allow them to advance in their project, since they represented a great threat to business performance:

- That the platform offered a quality service to users and a 24 × 7 availability

- That the platform supports very high traffic peaks at specific times

- Need for high computing and processing power

- Avoid the possibility of being an easy target of cyber attacks.

After sitting down with Eduard Losilla, founder and owner of the website, who shared his needs and interests with us, we concluded that the best solution was to customize an infrastructure and a private Cloud platform. In this way we begin to work to achieve the required results:

- Implement a high availability traffic inspection and balancing service to secure the platform

- Design an email platform to manage the company's corporate email

- Launch several virtual servers to show the application

- Deployment of an SQL cluster

- Start up a pre-production environment in order to carry out new developments and tests.

With the solutions focused on personalization, the platform has been able to support thousands of visits, thus validating one of every 15 crossings that are played throughout the State and managing the entire platform to allow the Quinielista team to focus on development. of your business.

Eduard Losilla, founder and owner of Quinielista:

"I highlight Ilimit's closeness and professionalism during twelve years of relationship."

From Ilimit and Quinielista we have a relationship of trust and proximity that we transfer to the continued maintenance of innovation, adapting to the growing needs of the portal, in order to work together, helping the growth of both companies.
