JOHNSON LAMBERT

Navisite Helps Leading CPA Firm Replace and Secure Infrastructure with Amazon WorkSpaces

Who is Johnson Lambert?

Johnson Lambert is a leading CPA firm that provides financial audits, tax compliance and advisory services. For over 30 years, they have focused on providing these services to a national and selectively international client base, including insurance entities, nonprofit organizations and ERISA-qualified benefit plans.

The Challenge

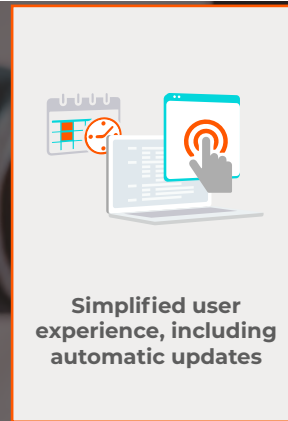

Johnson Lambert was struggling with a Citrix XenDesktop infrastructure that was inconsistent, slow and difficult to manage. On top of these challenges, the firm required enterprise-grade security for its desktops to adhere to the compliance requirements mandated by its financial services clients. Finally, the migration from Johnson Lambert's current system had to be seamless, since it couldn't afford any downtime for its distributed workforce.

The Solution

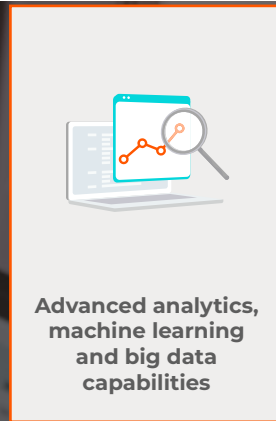

Navisite migrated Johnson Lambert to a secure VPC with Amazon WorkSpaces. Navisite leveraged a full stack of security solutions, including encryption at rest and in transit, endpoint security, Single Sign-On and Two-Factor Authentication. Navisite configured redundant Active Directory servers and authenticated WorkSpaces users through AD Connector. Shared files and folders are served from Windows Server 2016 on EC2. Users can also connect to their secure Workspace from anywhere, including

Enhanced security to safeguard client data

Simplified user experience, including automatic updates

Advanced analytics, machine learning and big data capabilities

Navisite has been great to deal with from the start. Effective communication and project management have been key to the success of getting our project off the ground.

David Fuge

Chief Information Officer
Johnson Lambert

Chromebooks, PCs and Zero Clients. Today, Johnson Lambert can confidently guarantee its clients that its has implemented enterprise-grade security to protect it's sensitive financial information.

Johnson Lambert has benefitted from a WorkSpaces solution that is extremely easy to manage. Working with Navisite, Johnson Lambert can maintain just a few "Golden Images" that contain the necessary applications for each work role. Additionally, the WorkSpaces clients and Chromebooks automatically update, and Zero Clients have no operating system to patch or update whatsoever.

Locating cloud desktops and back-office servers in AWS also makes it easy for Johnson Lambert to leverage more advanced AWS services for analytics, machine learning and big data. Johnson and Lambert can now aggressively pursue data driven decisions faster and more accurately using these additional, powerful AWS services that are now at their fingertips.
